09ZPOG - SIDNEY ANGIE

This book explores the complexity of communication and understanding as a possible asset in formal education rather than a problem that needs to be “fixed”. The authors examine the question and experience as pedagogical tools, challenging readers to play the critic and ask hard questions, beginning with: Why do the ideas discussed within the book matter? The digital information age with expanding ways of thinking, being, communicating, and learning complicates public education. So, what happens as diverse narratives collide in schools? To answer this question, the authors of this book delve into conflicting assumptions within the framework of complexity sciences and education in an attempt to explore space beyond positivist/anti-positivist debates. This involves examining the role of cultural and aesthetic narratives and cautionary tales as means of acknowledging possibilities in human experiences in education. These possibilities can facilitate praxis, as theory, research, and teaching become reflective practices, and as thinking about education broadens to include diverse methods of understanding and presenting complex phenomena.

Insider and outsider narratives on the essence of modern “extreme” sports.

A fascinating slice of social history - Jennifer Worth's tales of being a midwife in 1950s London, now a major BBC TV series. Jennifer Worth came from a sheltered background when she became a midwife in the Docklands in the 1950s. The conditions in which many women gave birth just half a century ago were horrifying, not only because of their grimly impoverished surroundings, but also because of what they were expected to endure. But while Jennifer witnessed brutality and tragedy, she also met with amazing kindness and understanding, tempered by a great deal of Cockney humour. She also earned the confidences of some whose lives were truly stranger, more poignant and more terrifying than could ever be recounted in fiction. Attached to an order of nuns who had been working in the slums since the 1870s, Jennifer tells the story not only of the women she treated, but also of the community of nuns (including one who was accused of stealing jewels from Hatton Garden) and the camaraderie of the midwives with whom she trained. Funny, disturbing and incredibly moving, Jennifer's stories bring to life the colourful world of the East End in the 1950s.

Recent developments have extended our knowledge of the basic functions of nerves: notably, the demonstration of the mechanism within nerve fibers which transports a wide range of essential materials. In order to understand how this discovery occurred, it is necessary to examine its history. The story begins in ancient Greece when nerves were conceived of as channels through which animal spirits carried sensory impressions to the brain. As science developed, the discoveries of various physical and chemical agents supplanted the agency of animal spirits until the molecular machinery of transport was recognized. In this fascinating and complete history, Sidney Ochs begins with a chronological look at this path of discovery, followed in the second half by a thematic approach wherein the author describes the electrical nature of the nerve impulse, fiber form and its changes in degeneration and regeneration, reflexes, learning, memory and other higher functions in which transport participates.

Losing It All to Sprawl is the poignant chronicle of award-winning nature writer Bill Belleville and how he came to understand and love his historic Cracker farmhouse and "relic" neighborhood in central Florida, even as it was all wiped out from under him. Belleville's narrative is eloquent, informed, and impassioned, a saga in which tractors and backhoes trample through the woods next to his home in order to build the backbone of Florida sprawl--the mall. As heavy machinery encircles Belleville and his community--the noise growing louder and closer, displacing everything Belleville has called home for the past fifteen years--he tells a story that is much older, 10,000 years older. The story stretches back to the Timucua and the Mayaca living in harmony with Florida's environment; the conquistadors who expected much from, but also feared, this "land of flowers"; the turn-of-the-century tourists "modernizing" and "climatizing" the state; the original Cracker families who lived in Belleville's farmhouse. In stark contrast to this millennia-long transformation is the whiplash of unbridled growth and development that threatens the nearby wilderness of the Wekiva River system, consuming Belleville's home and, ultimately, his very sense of place. In Florida, one of the nation's fastest growing states (and where local and state governments encourage growth), balancing use with preservation is an uphill battle. Sprawl spreads into the countryside, consuming not just natural lands but Old Florida neighborhoods and their unique history. In *Losing It All to Sprawl*, Belleville accounts for the impacts--social, political, natural, personal--that a community in the crosshairs of unsustainable growth ultimately must bear, but he also offers Floridians, and anyone facing the blight of urban confusion, the hope that can be found in the rediscovery and appreciation of the natural landscape.
