### HHKIRD - REYES FARRELL

---

Asthma is one of the most common chronic medical conditions in pregnancy 1 –3 and the second most common reason for administration of prescription drugs in pregnancy. 4 In Australia the incidence of asthma in the community is one of the highest in the world at 12–13%, much higher than figures quoted for the rest of the globe (3.7% to 8.4% ...

Asthma during pregnancy poses a common, increasingly prevalent threat to the health of women and their children. The present article reviews recent insights gained from the epidemiology of asthma during pregnancy, demonstrating the many short- and long-term risks to mother and fetus incurred by poorly controlled maternal asthma.

Asthma is a fairly common health problem for pregnant women, including some women who have never had it before. During pregnancy, asthma not only affects you, but it can also cut back on the oxygen your fetus gets from you. But this does not mean that having asthma will make your pregnancy more difficult or dangerous to you or your fetus.

Maternal asthma, especially poorly controlled asthma, is associated with higher rates of pregnancy complications, such as spontaneous abortions, placental problems, hemorrhage, high blood pressure, premature delivery, higher rates of cesarean section, and low birth weight.

Asthma and Pregnancy: A Review. In This Article. Asthma should be considered in any pregnant patient complaining of wheezing, cough, or dyspnea. Not all dyspnea in the pregnant patient is due to asthma, however, and other causes of dyspnea should be considered (including hematologic, cardiac, and pulmonary etiologies).

Asthma and pregnancy Investigating care and support of expectant women with asthma Dr. Graham Williamson has been involved in three projects investigating asthma and pregnancy, from the point of view of care and support of expectant mothers.

ANSWER. Your baby depends on a constant supply of oxygen in your blood to stay healthy and develop the way she should. If your asthma symptoms aren't controlled, your blood may not have enough oxygen to support your baby. This can lead to a low birth weight (less than 5.5 pounds). But that's not likely to happen.

The American College of Obstetrics and Gynecology supports good asthma control during pregnancy, recommending a preference for medications with a longer clinical history of safety during pregnancy and those administered by inhalation.

Allergens are things that cause you to have allergy symptoms. Many also cause asthma symptoms. Common allergens are pollens, molds, animal dander (small flakes of dead skin), dust mites and cockroaches. Limit your contact with allergens. If you still have asthma symptoms, talk to your health care provider.

University of Iowa Stead Family Children's Hospital: "Asthma and Pregnancy (Effects on the Mother and Baby.)" Reviewed by Kecia Gaither on May 5, 2017 How might pregnancy affect my asthma?

Researchers at the University of Southampton are to begin a new study investigating the underlying causes of asthma from before birth and in early childhood. The study will test how the mother's asthma during pregnancy changes asthma related mediators such as the ADAM33 gene in samples collected during elective caesarean birth.

Donations to UW Health are managed by the University of Wisconsin Foundation, a publicly supported charitable organization under 501(c)(3) of the Internal Revenue Code.

Asthma is a common comorbidity during pregnancy and its prevalence is increasing in the community. Exacerbations are a major clinical problem during pregnancy with up to 45% of women needing to seek medical help, resulting in poor outcomes for mothers and their babies, including low birth weight and preterm delivery.

With proper asthma management and good prenatal care, most women with asthma can have healthy pregnancies. Asthma and Pregnancy About Us Asthma And Pregnancy University Of

Background Asthma is common during pregnancy, however research is limited regarding the extent and timing of changes in asthma management associated with pregnancy. Objective To determine the prevalence of asthma during pregnancy and identify changes in treatment and asthma exacerbation rates associated with pregnancy, while controlling for seasonal influences.
