Bayesian Curve Fitting Using Mcmc Bayesian Curve Fitting Using MCMC With Applications to Signal Segmentation. Elena Punskeya, Christophe Andrieu, Arnaud Doucet, and William J. Fitzgerald. Abstract— We propose some Bayesian methods to address the problem of fitting a signal modeled by a sequence In this article, we report the use of a Bayesian approach to generate calibration curves and estimate unknown concentrations in immunoassays such as ELISA and Luminex assays. The Markov Chain Monte Carlo (MCMC) method is used to generate samples from the posterior distribution for the parameters and unknown concentrations jointly.

Plotting Bayesian models bayesplot is an R package providing an extensive library of plotting functions for use after fitting Bayesian models (typically with MCMC). The plots created by bayesplot are ggplot objects, which means that after a plot is created it can be further customized using various functions from the ggplot2 package.
