Capital budgeting is an important part of the financial management of a business organization. It is a process that business houses use to evaluate an investment project. The decision of whether to accept or deny an investment project is capital budgeting decision. Capital budgeting is important because it determines the long-term economic and financial profitability of any investment project. It lays down the future success of a business. Capital Budgeting aims to develop not only an understanding of the concepts of capital budgeting but also to provide its practical application to help students learn both theory and practice of capital budgeting used in the financial management of a business organization. It analyzes the capital budgeting practices of corporate enterprises in India in diverse sectors, on comparative basis, in order to provide the reader a better insight into the various issues and challenges regarding capital budgeting management.

Written by authors of established texts in this area, this book is a companion volume to the classic The Capital Budgeting Decision. Exploring this key topic in corporate finance the authors examine the complexities of capital budgeting as well as the opportunities to improve the decision process where risk and time are important elements. Containing 'Global Aspects' sections that cover cross-border decision-making, this book also emphasizes the application of capital budgeting techniques to a variety of issues, including the hugely significant 'buy versus lease' decision that cost corporations billions each year. It gives in-depth coverage to: real options - the value of a project must take into consideration the flexibility that it provides management, acknowledging the option of making decisions in the future when more information is available decomposing cash flows - a project consists of many series of cash flows and each series deserves its own specific risk-adjusted discount

rate. Decomposing the cash flows of an investment highlights the fact that while managers are generally aware that divisions and projects have different risks, too often they neglect the fact that the cash flow components may also have different risks, with severe consequences on the quality of the decision-making. Designed to assist those making business decisions at all levels, this volume is essential reading for all those working in or studying capital budgeting.

Financial Management in the Sport Industry provides readers with an understanding of sport finance and the importance of sound financial management in the sport industry. It begins by covering finance basics and the tools and techniques of financial quantification, using current industry examples to apply the principles of financial management to sport. It then goes beyond the basics to show how financial management works specifically in sport - how decisions are made to ensure wealth maximization. Discussions include debt and equity financing, capital budgeting, facility financing, economic impact, risk and return, time value of money, and more. The final section focuses on sport finance in three sectors of the industry - public sector sports, collegiate athletics, and professional sport-providing in-depth analysis of financial management in each sector. Sidebars, case studies, concept checks, and practice problems throughout provide practical applications of the material and enable thorough study and practice. The business of sport has changed dynamically since the publication of the first edition, and this second edition reflects the impact of these changes on financial management in the sport industry. New to this edition are changes to reflect the global nature of sport (with, for example, discussions of income tax rates in the Premiere League), expanded material on the use of spreadsheets for financial calculations, a primer on accounting principles to help students interpret financial statements, a valuation case study assignment that takes students step by step through a valuation, a new stadium feasibility analysis using the efforts of the Oakland Raiders to obtain a new stadium, a new economic impact example focusing on the NBA All Star game, and much more.

The focus of this text is on traditional theory applied to a holistic business case study, offering readers both a quantitative and qualitative perspective on such topics as capital budgeting, time value of money, corporate risk, and capital structure. Each section in the book corresponds to the order in which a business makes key financial decisions—as opposed to level of difficulty—allowing readers to grasp a comprehensive understanding of the corporate financial life cycle. Directly addressing the area of corporate finance in an applied setting, and featuring numerous case examples

Federally owned capital assets include some 500,000 buildings and similar facilities worldwide acquired during 200 years of government operations. Government facilities are used to defend the national interest; conduct foreign policy; house historic, cultural and educational artifacts; pursue research; and provide services to the American public. These buildings and structures project an image of American government at home and abroad, contribute to the architectural and socioeconomic fabric of their communities, and support the organizational and individual performance of federal employees conducting the business of government. Federal facilities embody significant investments and resources and therefore constitute a portfolio of public assets. At least 30 separate agencies manage these facilities. As stewards of this public investment, federal facilities program managers face a number of challenges. In the 1990s Congress and the Executive Branch took a number of initiatives to improve capital asset decision making in the federal government. These include enacting the Government Performance and Results Act of 1993, the Federal Acquisition Streamlining Act of 1994, the Clinger-Cohen Act of 1996 and a series of federal financial accounting standards; developing the Capital Programming Guide (1997); and appointing the President's Commission to Study Capital Budgeting (1997). Senior and mid-level agency officials are now seeking ways to implement these initiatives efficiently and effectively. The Federal Facilities Council (FFC) sponsored a conference entitled "Capital Asset Management: Tools and Strategies For Decision Making" to highlight strategies and ideas for capital asset management so that federal and other public agencies can improve decision making for facilities investment. Held at the National Academy of Sciences in Washington, D.C., on September 13, 2000, the conference featured speakers from the public, non-profit, and private sectors. Capital Asset Management: Tools and Strategies For Decision Making: Conference Proceedings summarizes the presentations made at that conference. The speakers focused on trends and best practices in capital budgeting; capital asset decision making processes in three federal agencies; building a case for capital reinvestment; and new tools for federal agencies. Online resources referred to by the speakers are listed in Appendix A. Appendix B contains the speakers' biographies.
