Fusion, Volume I: Magnetic Confinement, Part B is the second of the two-part volume that covers the complexity and application of controlled magnetic fusion. This part is composed of nine chapters and begins with a description of the heating methods, equilibrium, and stability of linear magnetic fusion systems. The next chapters deal with the principles, configuration, and application of high-beta stellarator, fast-linear-compression fusion systems, and ELMO Bumpy torus, as well as the magnetic confinement of high-temperature plasmas. These topics are followed by discussions of the neutral-beam injection; the regimes of radio-frequency heating of magnetically confined plasma; and the performance requirements of magnetic fusion reactors. The final chapters describe the basic processes in the fusion-fission fuel factory and some basic considerations for advanced-fuel reactors. This book will be of great value to physicists, physics students, and researchers.

Examine microeconomic theory as a way of looking at the world as MICROECONOMICS: AN INTUITIVE APPROACH WITH CALCULUS, 2E builds on the basic economic foundation of individual behavior. Each chapter contains two sections. The A sections introduce concepts using intuition, conversational writing, everyday examples, and graphs with a focus on mathematical counterparts. The B sections then cover the same concepts with precise, accessible mathematical analyses that assume one semester of single-variable calculus. The book offers flexible topical coverage with four distinct paths: a non-game theory path through microeconomics, a path emphasizing game theory, a path emphasizing policy issues, or a path focused on business. Readers can use B sections to explore topics in greater depth. The concept that certain objects and persons may be legitimately attacked during armed conflicts has been well recognized and developed through the history of warfare. This book explores the relationship between international law and targeting practice in determining whether an object is a lawful military target. By examining both the interpretation and its post-ratification application this book provides a comprehensive analysis of the definition of military objective adopted in 1977 Additional Protocol I to the four 1949 Geneva Conventions and its use in practice. Tackling topical issues such as the targeting of TV and radio stations or cyber targets, Agnieszka Jachec-Neale analyses the concept of military objective within the context of both modern military doctrine and the major coalition operations which have been undertaken since it was formally defined. This monograph will be of great interest to students and scholars of international law and the law of armed conflict, as well as security studies and international relations.

The WTO's Trade Policy Review Mechanism, which reviews the trade policies and practices of each WTO member at regular intervals, is generally considered to function well. In this day and age, complacency is unwise. Examining trade policy reviews throughout the lifetime of the TPRM, this book details its evolution from Article X of the General Agreement on Tariffs and Trade to the proposed modifications resulting from the mechanism's latest appraisal, examining the budgetary capabilities and technical performance of all the main entities who participate in the reviews. On the basis of these considerations, the author concludes that in order to remain relevant, especially in times of increased global protectionism, the TPRM could, and should do better, and provides unique and timely suggestions for reform.
