DDEC IV uses this air pressure data for fuel management during engine acceleration. The TBS sensor is supplied a 5-volt reference signal by ECM and returns a voltage signal to the ECM relative to turbo boost pressure. Return voltage increases as boost pressure increases. Operating values are 0.10-5.0 V during normal engine operation.

The most popular on-highway Detroit Diesel engine was the 12.7-liter, and on-highway engines are electronically-controlled by the proprietary Detroit Diesel Electronic Control (DDEC) system. The DDEC system was the first commercial use of a fully electronic control on a highway engine, and multiple years would pass before other manufacturers followed.
