This book is the first to systematically describe the key components necessary to ensure successful implementation of Collaborative Problem Solving (CPS) across mental health settings and non-mental health settings that require behavioral management. This resource is designed by the leading experts in CPS and is focused on the clinical and implementation strategies that have proved most successful within various private and institutional agencies. The book begins by defining the approach before delving into the neurobiological components that are key to understanding this concept. Next, the book covers the best practices for implementation and evaluating outcomes, both in the long and short term. The book concludes with a summary of the concept and recommendations for additional resources, making it an excellent concise guide to this cutting edge approach. Collaborative Problem Solving is an excellent resource for psychiatrists, psychologists, social workers, and all medical professionals working to manage troubling behaviors. The text is also valuable for readers interested in public health, education, improved law enforcement strategies, and all stakeholders seeking to implement this approach within their program, organization, and/or system of care.

Peru's Truth and Reconciliation Commission not only documented the political violence of the 1980s and 1990s but also gave Peruvians a unique opportunity to examine the causes and nature of that violence. In Art from a Fractured Past, scholars and artists expand on the commission's work, arguing for broadening the definition of the testimonial to include various forms of artistic production as documentary evidence. Their innovative focus on representation offers new and compelling perspectives on how Peruvians experienced those years and how they have attempted to come to terms with the memories and legacies of violence. Their findings about Peru offer insight into questions of art, memory, and truth that resonate throughout Latin America in the wake of "dirty wars" of the last half century. Exploring diverse works of art, including memorials, drawings, theater, film, songs, painted wooden retablos (three-dimensional boxes), and fiction, including an acclaimed graphic novel, the contributors show that art, not constrained by literal truth, can generate new opportunities for empathetic understanding and solidarity. Contributors. Ricardo Caro Cárdenas, Jesús Cossio, Ponciano del Pino, Cynthia M. Garza, Edilberto Jiménez Quispe, Cynthia E. Milton, Jonathan Ritter, Luis Rossell, Steve J. Stern, María Eugenia Ulfe, Víctor Vich, Alfredo Villar

Gaye Gronlund is an early childhood education consultant who trains early childhood educators across the country. Marlyn James is an education and early childhood professor. Results from national and international assessments indicate that school children in the United States are not learning mathematics well enough. Many students cannot correctly apply computational algorithms to solve problems. Their understanding and use of decimals and fractions are especially weak. Indeed, helping all children succeed in mathematics is an imperative national goal. However, for our youth to succeed, we need to change how we're teaching this discipline. Helping Children Learn Mathematics provides comprehensive and reliable information that will guide efforts to improve school mathematics from pre-kindergarten through eighth grade. The authors explain the five strands of mathematical proficiency and discuss the major changes that need to be made in mathematics instruction, instructional materials, assessments, teacher education, and the broader educational system and answers some of the frequently asked questions when it comes to mathematics instruction. The book concludes by providing recommended actions for parents and caregivers, teachers, administrators, and policy makers, stressing the importance that everyone work together to ensure a mathematically literate society.

The definitive treatment textbook in psychiatry, this fifth edition of Gabbard's Treatments of Psychiatric Disorders has been thoroughly restructured to reflect the new DSM-5® categories, preserving its value as a state-of-the-art resource and increasing its utility in the field. The editors have produced a volume that is both comprehensive and concise, meeting the needs of clinicians who prefer a single, user-friendly volume. In the service of brevity, the book focuses on treatment over diagnostic considerations, and addresses both empirically-validated treatments and accumulated clinical wisdom where research is lacking. Noteworthy features include the following: Content is organized according to DSM-5® categories to make for rapid retrieval of relevant treatment information for the busy clinician. Outcome studies and expert opinion are presented in an accessible way to help the clinician know what treatment to use for which disorder, and how to tailor the treatment to the patient. Content is restricted to the major psychiatric conditions seen in clinical practice while leaving out less common conditions and those that have limited outcome research related to the disorder, resulting in a more streamlined and affordable text. Chapters are meticulously referenced and include dozens of tables, figures, and other illustrative features that enhance comprehension and recall. An authoritative resource for psychiatrists, psychologists, and psychiatric nurses, and an outstanding reference for students in the mental health professions, Gabbard's Treatments of Psychiatric Disorders, Fifth Edition, will prove indispensable to clinicians seeking to provide excellent care while transitioning to a DSM-5® world.

For thirty years, Peter Singer's Practical Ethics has been the classic introduction to applied ethics. For this third edition, the author has revised and updated all the chapters and added a new chapter addressing climate change, one of the most important ethical challenges of our generation. Some of the questions discussed in this book concern our daily lives. Is it ethical to buy luxuries when others do not have enough to eat? Should we buy meat from intensively reared animals? Am I doing something wrong if my carbon footprint is above the global average? Other questions confront us as concerned citizens: equality and discrimination on the grounds of race or sex; abortion, the use of embryos for research and euthanasia; political violence and terrorism; and the preservation of our planet's environment. This book's lucid style and provocative arguments make it an ideal text for university courses and for anyone willing to think about how she or he ought to live.

Since it first appeared on bookshelves,The Bipolar Childhas made an indelible mark on the field of psychiatry and has become the resource that families rely upon. Now, with more than 200,000 copies sold, the first book about early-onset bipolar disorder is completely revised and expanded. Bipolar disorder—manic depression—was once thought to be rare in children. Now researchers are discovering not only that bipolar disorder can begin early in life, but that it is much more common than ever imagined. Yet the illness is often misdiagnosed and mistreated with medications that can exacerbate the symptoms. Why? Bipolar disorder manifests itself differently in children than in adults, and in children there is an overlap of symptoms with other childhood psychiatric disorders. As a result, these kids may be labeled with any of a number of psychiatric conditions: “ADHD,” “depression,” “oppositional defiant disorder,” “obsessive-compulsive disorder,” or “generalized anxiety disorder.” Too often they are treated with stimulants or antidepressants—medications that can actually worsen the bipolar condition. Since the publication of its first edition,The Bipolar Childhas helped many thousands of families get to the root cause of their children’s behaviors and symp-

toms and find what they need to know. The Papoloses comprehensively detail the diagnosis, explain how to find good treatment and medications, and advise parents about ways to advocate effectively for their children in school. In this edition, a greatly expanded education chapter describes all the changes in educational law due to the 2004 reauthorization of IDEA (Individuals with Disabilities Education Act), and offers a multitude of ideas for parents and educators to help the children feel more comfortable in the academic environment. The book also contains crucial information about hospitalization, the importance of neuropsychological testing (with a recommended battery of tests), and the world of insurance. Included in these pages is information on promising new drugs, greater insight into the special concerns of teenagers, and additional sections on the impact of the illness on the family. In addition, an entirely new chapter focuses on major advances taking place in the field of molecular genetics and offers hope that researchers will better understand the illness and develop more targeted and easier-to-tolerate medicines. The Bipolar Childis rich with the voices of parents, siblings, and the children themselves, opening up the long-closed world of the families struggling with this condition. This book has already proved to be an invaluable resource for parents whose children suffer from mood disorders, as well as for the professionals who treat and educate them, and this new edition is sure to continue to light the way.

Early childhood mathematics is vitally important for young children's present and future educational success. Research demonstrates that virtually all young children have the capability to learn and become competent in mathematics. Furthermore, young children enjoy their early informal experiences with mathematics. Unfortunately, many children's potential in mathematics is not fully realized, especially those children who are economically disadvantaged. This is due, in part, to a lack of opportunities to learn mathematics in early childhood settings or through everyday experiences in the home and in their communities. Improvements in early childhood mathematics education can provide young children with the foundation for school success. Relying on a comprehensive review of the research, Mathematics Learning in Early Childhood lays out the critical areas that should be the focus of young children's early mathematics education, explores the extent to which they are currently being incorporated in early childhood settings, and identifies the changes needed to improve the quality of mathematics experiences for young children. This book serves as a call to action to improve the state of early childhood mathematics. It will be especially useful for policy makers and practitioners-those who work directly with children and their families in shaping the policies that affect the education of young children.

"Working 13 years with students who are diagnosed with sever autism, my colleagues and I have often wanted to visualize and better understand what our students were seeing, feeling and thinking. Judy Endow's Painted Words takes us on a picturesque journey into the mind of one autistic person through her vivid and breathtaking paintings and sculptures while also explaining in detailed description and poetry what she sees and, via sensory, how she experiences it. Helpful suggestions for working with individuals on the spectrum open a treasure box of insights. Having this 'backstage pass' into autism will be priceless for educators, parents and individuals on the autism spectrum."--Joanna L. Keating-Velasco, educator, and author of A is for Autism, F is for Friend: A Kid's Book for Making Friends with a Child Who Has Autism. "Judy Endow combines her art, poetry, and prose to create a thought-provoking book of self-discovery that viscerally captures the essence of a world which only few experience- a world of subtle beauty that can turn too bright, loud, and overwhelming. The practical advice at the end of each chapter has helped me understand and be a better parent to my autistic child. Painted Words is a book to read, reread and share with other parents, educators, physicians, and therapists so they too can learn to appreciate the autistic experience.
