The Encyclopedia of Environmental Health seeks to conceptualize the subject more clearly, to describe the best available scientific methods that can be used in characterizing and managing environmental health risks, to extend the field of environmental

health through new theoretical perspectives and heightened appreciation of social, economic and political contexts, and to encourage a richer analysis in the field through examples of diverse experiences in dealing with the health-environment ...

According to the EU (as per its 1996 Pollution Directive): "'Pollution' shall mean the direct or indirect introduction as a result of human activity, of substances, vibrations, heat or noise into the air, water or land which may be harmful to human health or the quality of the environment, result in damage to materiel property, or impair or interfere with amenities and other legitimate uses of the environment."

Industrial Pollution | Encyclopedia.com

Pollution is the introduction of harmful materials into the environment. These harmful materials are called pollutants. Pollutants can be natural, such as volcanic ash. They can also be created by human activity, such as trash or runoff produced by factories. Pollutants damage the quality of air, water, and land.

Environmental Pollution Control

Encyclopædia Britannica, Inc. Efforts to improve the standard of living for humans—through the control of nature and the development of new products—have also resulted in the pollution, or contamination, of the environment. Much of the world's air, water, and land is now partially poisoned by chemical wastes. The Elgar Encyclopedia of Environmental Law is a landmark reference work, providing definitive and comprehensive coverage of this dynamic field. The Encyclopedia is organised into 12 volumes around top-level subjects – such as water, energy and climate
