Environmental educators face a formidable challenge when they approach climate change due to the complexity of the science and of the political and cultural contexts in which people live. There is a clear consensus among climate scientists that climate change is already occurring as a result of human activities, but high levels of climate change awareness and growing levels of concern have not translated into meaningful action. Communicating Climate Change provides environmental educators with an un-

derstanding of how their audiences engage with climate change information as well as with concrete, empirically tested communication tools they can use to enhance their climate change program. Starting with the basics of climate science and climate change public opinion, Armstrong, Krasny, and Schuldt synthesize research from environmental psychology and climate change communication, weaving in examples of environmental education applications throughout this practical book. Each chapter covers a separate topic, from how environmental psychology explains the complex ways in which people interact with climate change information to communication strategies with a focus on framing, metaphors, and messengers. This broad set of topics will aid educators in formulating program language for their classrooms at all levels. Communicating Climate Change uses fictional vignettes of climate change education programs and true stories from climate

change educators working in the field to illustrate the possibilities of applying research to practice. Armstrong et al, ably demonstrate that environmental education is an important player in fostering positive climate change dialogue and subsequent climate change action. An open access version of this book is available through Cornell Open.

Understanding Loss: A Guide for Caring for Those Facing Adversity. Routledge. Loss and consequent grief permeates nearly every life changing event, from death to health concerns to dislocation to relationship breakdown to betrayal to natural disaster to faith issues. Yet, while we know about particular events of loss independently, we know very little about a psychology of loss that draws many adversities together. This universal experience of loss as a concept in its own right sheds light on so much of the work we do in the care of others. This book develops a new overarching framework to understand loss and grief, taking into account both pathological and wellbeing approaches to the subject. Drawing on international and cross-disciplinary research, Judith Murray highlights nine common themes of loss, helping us to understand how it is experienced. These themes are then used to develop a practice framework for structuring assessment and intervention systematically. Throughout the book, this generic approach is highlighted through discussing its use in different loss events such as bereavement, trauma, chronic illness and with children or older people. Having been used in areas as diverse as child protection, palliative care and refugee care, the framework can be tailored to a range of needs and levels of care. Caring for people experiencing loss is an integral part of the work of helping professions, whether it is explicitly part of their work such as in counselling, or implicit

as in social work, nursing, teaching, medicine and community work. This text is an important guide for anyone working in these areas. *A Dumping Ground: A History of the Cherbourg Settlement*. Univ. of Queensland Press. Cherbourg settlement was a home to many. But it was never the haven the Queensland government intended. By the end of the 19th century, at the height of Queensland's Aboriginal protectionist-policy practice, the idea of establishing two government-controlled Aboriginal reserves at either end of the state was nearing realisation. The reserve established in Queensland's south began as Barambah in 1901 and was later renamed Cherbourg. Various described as bold, well meaning and misguided, it was a social experiment in institutional control that was to impact on the lives of thousands of Aboriginal families in ways that continue to this day. In this revealing, first-ever publication on Cherbourg Settlement's history 1900-1940, Thom Blake adds the vital dimension of interviews with former residents. Supported by maps, archival documents and letters, this book illustrates an Aboriginal reserve's evolution under government practice. It also explores the dynamics of cultural resilience through the generations. *Assignment Writing Handbook 1998*. ACS Style Guide. *Effective Communication of Scientific Information*. Oxford University Press. In the time since the second edition of *The ACS Style Guide* was published, the rapid growth of electronic communication has dramatically changed the scientific, technical, and medical (STM) publication world. This dynamic mode of dissemination is enabling scientists, engineers, and medical practitioners all over the world to obtain and transmit information quickly and easily. An essential constant in this changing environment is the requirement that information remain accurate, clear, unambiguous,

and ethically sound. This extensive revision of The ACS Style Guide thoroughly examines electronic tools now available to assist STM writers in preparing manuscripts and communicating with publishers. Valuable updates include discussions of markup languages, citation of electronic sources, online submission of manuscripts, and preparation of figures, tables, and structures. In keeping current with the changing environment, this edition also contains references to many resources on the internet. With this wealth of new information, The ACS Style Guide's Third Edition continues its long tradition of providing invaluable insight on ethics in scientific communication, the editorial process, copyright, conventions in chemistry, grammar, punctuation, spelling, and writing style for any STM author, reviewer, or editor. The Third Edition is the definitive source for all information needed to write, review, submit, and edit scholarly and scientific manuscripts. *Financing in Europe: Evolution, Coexistence and Complementarity of Lending Practices from the Middle Ages to Modern Times* Springer This book explores the evolution of credit and financing in Europe from the Middle Ages through to Modern Times. It engages with the distinct political, economic and institutional frameworks of the examined areas (England, Italy, France, Germany, Spain, the Netherlands and Turkey) and discusses how these affected the credit market. It covers a wide range of different types of lending and borrowing instruments, the destination of capital, the way it was raised, and the impact it had on local or national economies in a very long run. Presented in two parts, part one of the book focuses on credit markets in the preindustrial age, in particular the period before the advent of modern joint stock banks. Part two examines the evolution of credit at the

time of the emergence of modern banks. This volume will be of interest to academics and researchers in the field of finance who are interested in the historic evolution of credit and the credit market. *Robotics, Vision and Control: Fundamental Algorithms in MATLAB* Springer The author has maintained two open-source MATLAB Toolboxes for more than 10 years: one for robotics and one for vision. The key strength of the Toolboxes provide a set of tools that allow the user to work with real problems, not trivial examples. For the student the book makes the algorithms accessible, the Toolbox code can be read to gain understanding, and the examples illustrate how it can be used —instant gratification in just a couple of lines of MATLAB code. The code can also be the starting point for new work, for researchers or students, by writing programs based on Toolbox functions, or modifying the Toolbox code itself. The purpose of this book is to expand on the tutorial material provided with the toolboxes, add many more examples, and to weave this into a narrative that covers robotics and computer vision separately and together. The author shows how complex problems can be decomposed and solved using just a few simple lines of code, and hopefully to inspire up and coming researchers. The topics covered are guided by the real problems observed over many years as a practitioner of both robotics and computer vision. It is written in a light but informative style, it is easy to read and absorb, and includes a lot of Matlab examples and figures. The book is a real walk through the fundamentals of robot kinematics, dynamics and joint level control, then camera models, image processing, feature extraction and epipolar geometry, and bring it all together in a visual servo system. Venoms to Drugs Venom as a Source for the Development of Human Therapeutics Royal Society of Chemistry- The pharmaceutical industry has become increasingly interested in biologics from animal venoms as a potential source for thera-

peutic agents in recent years, with a particularly emphasis on peptides. To date six drugs derived from venom peptides or proteins have been approved by the FDA, with nine further agents currently being investigated in clinical trials. In addition to these drugs in approved or advanced stages of development, many more peptides and proteins are being studied in varying stages of preclinical development. This unique book provides an up to date and comprehensive account of the potential of peptides and proteins from animal venoms as possible therapeutics. Topics covered include chemistry and structural biology of animal venoms, proteomic and transcriptomic approaches to drug discovery, bioassays, high-throughput screens and target identification, and reptile, scorpion, spider and cone snail venoms as a platform for drug development. Case studies are used to illustrate methods and successes and highlight issues surrounding administration and other important lessons that have been learnt from the development of approved therapeutics based on venoms. The first text to focus on this fascinating area and bridging an important gap, this book provides the reader with essential and current knowledge on this fast-developing area. Venoms to Drugs will find wide readership with researchers working in academia and industry working in all medicinal and pharmaceutical areas. Loss and consequent grief permeates nearly every life changing event, from death to health concerns to dislocation to relationship breakdown to betrayal to natural disaster to faith issues. Yet, while we know about particular events of loss independently, we know very little about a psychology of loss that draws many adversities together. This universal experience of loss as a concept in its own right sheds light on so much of the work we do in the care of others. This book develops a new overarching framework to understand loss and grief, taking into account both pathological and wellbeing approaches to the subject. Drawing on international and cross-disciplinary research, Judith Murray highlights nine common themes of loss, helping us to understand how it is experienced. These themes are then used to develop a practice framework for structuring assessment and intervention systematically. Throughout the book, this generic approach is highlighted through discussing its use in different loss events such as bereavement, trauma, chronic illness and with children or older people. Having been used in areas as diverse as child protection, palliative care and refugee care, the framework can be tailored to a

range of needs and levels of care. Caring for people experiencing loss is an integral part of the work of helping professions, whether it is explicitly part of their work such as in counselling, or implicit as in social work, nursing, teaching, medicine and community work. This text is an important guide for anyone working in these areas.

Used across the public health field, this is the leading text in the area, focusing on the context, participants and processes of making health policy.

Qualitative Methods in Public Health: A Field Guide for Applied Research, 2nd Edition provides a practical orientation to conducting effective qualitative research in the public health sphere. With thorough examination and simple explanations, this book guides you through the logic and workflow of qualitative approaches,

with step-by-step guidance on every phase of the research. Students learn how to identify and make use of theoretical frameworks to guide your study, design the study to answer specific questions, and achieve their research goals. Data collection, analysis, and interpretation are given close attention as the backbone of a successful study, and expert insight on reporting and dissemination helps you get your work noticed. This second edition features new examples from global health, including case studies specifically illustrating study design, web and mobile technologies, mixed methods, and new innovations in information dissemination. Pedagogical tools have been added to help enhance your understanding of research design and implementation, and extensive appendices show you how these concepts work in practice. Qualitative research is a powerful tool for public health, but it's very easy to get it wrong. Careful study design and data management are critical, and it's important to resist drawing conclusions that the data cannot support. This book shows you how to conduct high-quality qualitative research that stands up to review.

A comprehensive overview of Monte Carlo simulation that explores the latest topics, techniques, and real-world applications. More and more of today's numerical problems found in engineering and finance are solved through Monte Carlo methods. The heightened popularity of these methods and their continuing development makes it important for researchers to have a comprehensive understanding of the Monte Carlo approach. Handbook of Monte Carlo Methods provides the theory, algorithms, and applications that helps provide a thorough understanding of the emerging dynamics of this rapidly-growing field. The authors begin with

a discussion of fundamentals such as how to generate random numbers on a computer. Subsequent chapters discuss key Monte Carlo topics and methods, including: Random variable and stochastic process generation Markov chain Monte Carlo, featuring key algorithms such as the Metropolis-Hastings method, the Gibbs sampler, and hit-and-run Discrete-event simulation Techniques for the statistical analysis of simulation data including the delta method, steady-state estimation, and kernel density estimation Variance reduction, including importance sampling, latin hypercube sampling, and conditional Monte Carlo Estimation of derivatives and sensitivity analysis Advanced topics including cross-entropy, rare events, kernel density estimation, quasi Monte Carlo, particle systems, and randomized optimization The presented theoretical concepts are illustrated with worked examples that use MATLAB®, a related Web site houses the MATLAB® code, allowing readers to work hands-on with the material and also features the author's own lecture notes on Monte Carlo methods. Detailed appendices provide background material on probability theory, stochastic processes, and mathematical statistics as well as the key optimization concepts and techniques that are relevant to Monte Carlo simulation. Handbook of Monte Carlo Methods is an excellent reference for applied statisticians and practitioners working in the fields of engineering and finance who use or would like to learn how to use Monte Carlo in their research. It is also a suitable supplement for courses on Monte Carlo methods and computational statistics at the upper-undergraduate and graduate levels.

Cherbourg settlement was a home to many. But it was never the haven the Queensland government intended. By the end of the

19th century, at the height of Queensland's Aboriginal protectionist-policy practice, the idea of establishing two government-controlled Aboriginal reserves at either end of the state was nearing realisation. The reserve established in Queensland's south began as Barambah in 1901 and was later renamed Cherbourg. Various-ly described as bold, well meaning and misguided, it was a social experiment in institutional control that was to impact on the lives of thousands of Aboriginal families in ways that continue to this day. In this revealing, first-ever publication on Cherbourg Settlement's history 1900-1940, Thom Blake adds the vital dimension of interviews with former residents. Supported by maps, archival documents and letters, this book illustrates an Aboriginal reserve's evolution under government practice. It also explores the dynamics of cultural resilience through the generations.

The pharmaceutical industry has become increasingly interested in biologics from animal venoms as a potential source for therapeutic agents in recent years, with a particularly emphasis on peptides. To date six drugs derived from venom peptides or proteins have been approved by the FDA, with nine further agents currently being investigated in clinical trials. In addition to these drugs in approved or advanced stages of development, many more peptides and proteins are being studied in varying stages of preclinical development. This unique book provides an up to date and comprehensive account of the potential of peptides and proteins from animal venoms as possible therapeutics. Topics covered include chemistry and structural biology of animal venoms, proteomic and transcriptomic approaches to drug discovery, bioassays, high-throughput screens and target identification, and reptile, scorpion, spider and cone snail venoms as a platform for drug development. Case studies are used to illustrate methods and successes and highlight issues surrounding administration and other important lessons that have been learnt from the development of approved therapeutics based on venoms. The first text to focus on this fascinating area and bridging an important gap, this book provides the reader with essential and current knowledge on this fast-developing area. Venoms to Drugs will find wide

readership with researchers working in academia and industry working in all medicinal and pharmaceutical areas.

This volume fills a gap in the international business literature, offering the perspectives of researchers who are deeply embedded in one key emerging market, India. With the global economy changing dramatically, firms from emerging markets are playing increasingly important roles in both outward and inward internationalisation. International Business Strategy offers profound insights into international business activities in this rapidly-evolving

environment, in which multinational corporations from emerging markets are now influential players. Reflecting the complex nature of India itself, the chapters employ a variety of theoretical lenses to shed light on a wide range of issues encountered by Indian businesses, from some of the world's largest corporations to small, entrepreneurial firms.

The pieces in this seminal collection represent almost four decades of writing by historian and activist Jackie Huggins. These essays, speeches and interviews combine both the public and the personal in a bold trajectory tracing one Murri woman's journey towards self-discovery and human understanding. As a widely respected cultural educator and analyst, Huggins offers an Aboriginal view of the history, values and struggles of Indigenous people. Sister Girl reflects on many important and timely topics, including identity, activism, leadership and reconciliation. It challenges accepted notions of the appropriateness of mainstream feminism in Aboriginal society and of white historians writing Indigenous history. Jackie Huggins' words, then and now, offer wisdom, urgency and hope.

The author has maintained two open-source MATLAB Toolboxes for more than 10 years: one for robotics and one for vision. The key strength of the Toolboxes provide a set of tools that allow the user to work with real problems, not trivial examples. For the student the book makes the algorithms accessible, the Toolbox code can be read to gain understanding, and the examples illustrate how it can be used —instant gratification in just a couple of lines of MATLAB code. The code can also be the starting point for new work, for researchers or students, by writing programs based on

Toolbox functions, or modifying the Toolbox code itself. The purpose of this book is to expand on the tutorial material provided with the toolboxes, add many more examples, and to weave this into a narrative that covers robotics and computer vision separately and together. The author shows how complex problems can be decomposed and solved using just a few simple lines of code, and hopefully to inspire up and coming researchers. The topics covered are guided by the real problems observed over many years as a practitioner of both robotics and computer vision. It is written in a light but informative style, it is easy to read and absorb, and includes a lot of Matlab examples and figures. The book is a real walk through the fundamentals of robot kine-

matics, dynamics and joint level control, then camera models, image processing, feature extraction and epipolar geometry, and bring it all together in a visual servo system. Additional material is provided at <http://www.petercorke.com/RVC>
