Ten Strategies of a World-Class Cyber Security Operations Center conveys MITRE's accumulated expertise on enterprise-grade computer network defense. It covers ten key qualities of leading Cyber Security Operations Centers (CSOCs), ranging from their structure and organization, to processes that best enable smooth operations, to approaches that extract maximum value from key CSOC technology investments. This book offers perspective and context for key decision points in structuring a CSOC, such as what capabilities to offer, how to architect large-scale data

collection and analysis, and how to prepare the CSOC team for agile, threat-based response. If you manage, work in, or are standing up a CSOC, this book is for you. It is also available on MITRE's website, www.mitre.org. The aim of this book is to present, in a simple and practical way, the current knowledge of management that has been developed by and for Olympic Sport Organisations (OSOs) worldwide. The book is composed of six chapters that cover six key competencies expected of OSO managers: 1/ Organising an OSO by understanding its environment, internal structure and operations. 2/ Managing an OSO strategically

by preparing, carrying out and evaluating a strategic plan. 3/ Managing human resources in an OSO through the development of rules and regulations, recruitment, motivation and training. 4/ Managing an OSO's finances using appropriate and transparent procedures. 5/ Managing marketing in an OSO in line with the global strategy of the organisation, stakeholders' requirements and sponsorship opportunities. 6/ Organising major sport events, when appropriate for the organisation's strategy and when compatible with available human resources and facilities. The Network Defense Series from EC-Council | Press is comprised of 5

books designed to educate learners from a vendor-neutral standpoint how to defend the networks they manage. This series covers the fundamental skills in evaluating internal and external threats to network security and design, how to enforce network level security policies, and how to ultimately protect an organization's information. The books in the series cover a broad range of topics from secure network fundamentals, protocols & analysis, standards and policy, hardening infrastructure, to configuring IPS, IDS, firewalls, bastion host and honeypots. Learners completing this series will have a full understanding of defensive measures taken to secure their organization's information, and along with the proper experience these books will prepare readers for the EC-Council Network Security Administrator (E|NSA) certification. An organization is only as strong as its weakest link. The same is true in network security. Misconfigurations, outdated software and technical glitches are often the easiest point of entry for a hacker. This book, the third in the series, is designed to teach the potential security practitioner

how to harden the network infrastructure, evaluate hardware and software configurations and introduce log analysis, creating a strong foundation for Network Security Troubleshooting, response, and repair. Facing threats ranging from Islamist insurgencies to the Ebola pandemic, African regional actors are playing an increasingly vital role in safeguarding peace and stability across the continent. But while the African Union has demonstrated its ability to deploy forces on short notice and in difficult circumstances, the challenges posed by increasingly complex conflict zones have revealed a widening divide between the theory and practice of peacekeeping. With the AU's African Standby Force becoming fully operational in 2016, this timely and much-needed work argues that responding to these challenges will require a new and distinctively African model of peacekeeping, as well as a radical revision of the current African security framework. The first book to provide a

comprehensive overview and analysis of African peace operations, *The Future of African Peace Operations* gives a long overdue assessment of the ways in which peacekeeping on the continent has evolved over the past decade. It will be a vital resource for policy makers, researchers and all those seeking solutions and insights into the immense security challenges which Africa is facing today.

The Revenue Watch program and the Initiative for Policy Dialogue promote transparency and civic participation in natural resource policymaking. Journalists know how hard it is to report on government management of oil, gas, and other natural resource revenues. Governments and industry are seldom forthcoming. And reporters themselves usually lack the background in economics, engineering, geology, and corporate finance helpful to understanding the energy industry and the effects of resource wealth. This book attempts to redress the balance with practical information in easy to understand language. Chapters include *Understanding the Resource Curse*, *A Primer on Oil*, *Oil Companies and the International Oil Market*, the

ABCs of Petroleum Contracts, and the Environmental, Social, and Human Rights Impacts of Oil Development. Tip sheets inform reporters about stories to pursue and questions to ask.

In the 21st century, higher education faces a number of challenges: We need to prepare students for the complexities of a highly interconnected world so that they can act as responsible citizens within a global society as change agents. Transnational collaboration projects offer unique opportunities for their education. They prepare students to work towards social change across cultural and geographical boundaries and to move beyond the distinction between global and local. Merging global and local means merging local learning, engagement, and impact with global communication, collaboration, and knowledge production. The mix of global and local- glocal- characterizes our approach to transnational collaboration and our teaching and learning model. We introduce a glocal curriculum that aims to foster education in fields as diverse as higher education for sustainable development, e.g. global health, the humanities,

philosophy. The glocal curriculum is based on experiences from the "Global Classroom: Liberal Arts Education in the 21st Century," a teaching and research project of Leuphana University Luneburg (Germany) and Arizona State University (USA). In this Handbook we present resources and reflections that we developed to support the education of change agents who are willing to critically and creatively contribute to sustainability transformations. The book covers three different stages, from (i) envisioning the glocal curriculum and its design to (ii) implementing and evaluating the glocal curriculum and program, to (iii) designing the glocal teaching-learning environment. Using a workshop approach, the Handbook provides valuable guidance for strategic university development, curriculum and program developers, quality managers, teachers and instructors who are interested in innovative approaches that allow the development of critical and transformative mindsets, knowledge, and skills in order to address the sustainability problems of the 21st century.

Airline Operations and Management: A Management Textbook is a survey of the airline industry, mostly from a managerial perspective. It integrates and applies the fundamentals of several management disciplines, particularly economics, operations, marketing and finance, in developing the overview

of the industry. The focus is on tactical, rather than strategic, management that is specialized or unique to the airline industry. The primary audiences for this textbook are both senior and graduate students of airline management, but it should also be useful to entry and junior level airline managers and professionals seeking to expand their knowledge of the industry beyond their own functional area.

Beginning with a basic primer on reverse engineering-including computer internals, operating systems, and assembly language-and then discussing the various applications of reverse engineering, this book provides readers with practical, in-depth techniques for software reverse engineering. The book is broken into two parts, the first deals with security-related reverse engineering and the second explores the more practical aspects of reverse engineering. In addition, the author explains how to reverse engineer a third-party software library to improve interfacing and how to reverse engineer a competitor's software to build a better product. * The first popular book to show how software reverse engineering

can help defend against security threats, speed up development, and unlock the secrets of competitive products * Helps developers plug security holes by demonstrating how hackers exploit reverse engineering techniques to crack copy-protection schemes and identify software targets for viruses and other malware * Offers a primer on advanced reverse-engineering, delving into "disassembly"-code-level reverse engineering-and explaining how to decipher assembly language

The only comprehensive account of operational risk in securities settlements Securities Operations focuses on the settlement aspects of a securities transaction. As financial analysts make a greater effort toward quantifying and managing operational risk, they are paying more attention to securities transactions in general and to the settlement phase in particular. While describing the practical issues, this book enumerates the different "back office" related risks potentially encountered throughout the settlement. Simmons also covers more advanced topics such as derivatives, trade compensation, internal allocation of

funding costs, and operational performance measurement. Michael Simmons (London, UK) is currently Head of Business Consultancy at Wilco International, a major software systems provider to the financial markets. Over the years, financial professionals around the world have looked to the Wiley Finance series and its wide array of bestselling books for the knowledge, insights, and techniques that are essential to success in financial markets. This updated resource provides a more comprehensive history, including: Iran's Persian imperial

past, the spread of Islam, and the Iran-Iraq War The Islamic Revolutionary Guard Corps Navy (IRGC-N) emphasizes an asymmetric doctrine to ensure national security in the Persian Gulf against regional neighbors and foreign presence. The Islamic Republic of Iran Navy (IRIN) employs a more conventional doctrine and focuses on forward presence and naval diplomacy. Both navies have considerable equities and are well positioned to influence and leverage the Strait of Hormuz; a vital chokepoint for the flow of resources and international commerce. Illustrated with organizational charts, and photos of key Iranian leaders, including commanders within the Navy Command and Control Leadership, as well as rank insignia graphics, maps, ships, aircrafts, missile images, and more. The U.S. Navy is ready to execute the Nation's tasks at sea, from prompt and sustained combat operations to every-day forward-presence, diplomacy and relief efforts. We operate worldwide, in space, cyberspace, and throughout the maritime domain. The United States is and will remain a maritime nation, and our security and prosperity are inextricably linked to our ability to operate naval forces on, under and above the seas and oceans of the world. To that end, the Navy executes programs that enable our Sailors, Marines,

civilians, and forces to meet existing and emerging challenges at sea with confidence. Six priorities guide today's planning, programming, and budgeting decisions: (1) maintain a credible, modern, and survivable sea based strategic deterrent; (2) sustain forward presence, distributed globally in places that matter; (3) develop the capability and capacity to win decisively; (4) focus on critical afloat and ashore readiness to ensure the Navy is adequately funded and ready; (5) enhance the Navy's asymmetric capabilities in the physical domains as well as in cyberspace and the electromagnetic spectrum; and (6) sustain a relevant industrial base, particularly in shipbuilding.

In the summer of 1803, Thomas Jefferson sent Meriwether Lewis and William Clark on a journey to establish an American presence in a land of unqualified natural resources and riches. Is it fitting that, on the 200th anniversary of that expedition, the United States, together with international partners, should embark on another journey of exploration in a vastly more extensive region of remarkable potential for discovery. Although the oceans cover more than

70 percent of our planet's surface, much of the ocean has been investigated in only a cursory sense, and many areas have not been investigated at all. Exploration of the Seas assesses the feasibility and potential value of implementing a major, coordinated, international program of ocean exploration and discovery. The study committee surveys national and international ocean programs and strategies for cooperation between governments, institutions, and ocean scientists and explorers, identifying strengths, weaknesses, and gaps in these activities. Based primarily on existing documents, the committee summarizes priority areas for ocean research and exploration and examines existing plans for advancing ocean exploration and knowledge.

During July 10-13, 2011, 68 participants from 32 countries gathered in Istanbul, Turkey for a workshop organized by the United States National Research Council on Anticipating Biosecurity Challenges of the Global Ex-

pansion of High-containment Biological Laboratories. The United States Department of State's Biosecurity Engagement Program sponsored the workshop, which was held in partnership with the Turkish Academy of Sciences. The international workshop examined biosafety and biosecurity issues related to the design, construction, maintenance, and operation of high-containment biological laboratories- equivalent to United States Centers for Disease Control and Prevention biological safety level 3 or 4 labs. Although these laboratories are needed to characterize highly dangerous human and animal pathogens, assist in disease surveillance, and produce vaccines, they are complex systems with inherent risks. Biosecurity Challenges of the Global Expansion of High-Containment Biological Laboratories summarizes the workshop discussion, which included the following topics: Technological options to meet diagnostic, research, and other goals; Laboratory construction and commissioning; Operational maintenance to provide sustainable capabilities, safety, and security; and Measures for encouraging a culture of responsible conduct. Work-

shop attendees described the history and current challenges they face in their individual laboratories. Speakers recounted steps they were taking to improve safety and security, from running training programs to implementing a variety of personnel reliability measures. Many also spoke about physical security, access controls, and monitoring pathogen inventories. Workshop participants also identified tensions in the field and suggested possible areas for action.

As long ago as 1957, U.S. Army Special Forces soldiers were in the Republic of Vietnam, going about their business of training, advising, and assisting members of the Vietnamese Army. Despite the old Army witticism about never volunteering for anything, the Special Forces soldier is, in fact, a double volunteer, having first volunteered for airborne training and then again for Special Forces training. From a very meager beginning but sustained by a strong motivation and confidence in his mission, the Special Forces soldier has marched through the Vietnam struggle in superb fashion. In 1957 some fifty-eight Vietnamese soldiers were given mili-

tary training by Special Forces troops. Ten years later the Special Forces were advising and assisting over 40,000 paramilitary troops, along with another 40,000 Regional Forces and Popular Forces soldiers. This monograph traces the development and notes the progress, problems, successes, and failures of a unique program undertaken by the U.S. Army for the first time in its history. It is hoped that all the significant lessons learned have been recorded and the many pitfalls of such a program uncovered. I am responsible for the conclusions reached, yet my thought processes could not escape the influence of the many outstanding officers and men in the Special Forces who joined in the struggle. Particularly, I must take note of the contributions of the Special Forces noncommissioned officers, without question the most competent soldiers in the world. With the withdrawal of the Special Forces from Vietnam in 1971, the Army could honestly lay claim to a new dimension in ground warfare-the organized employment of a paramilitary force in sustained combat against a determined enemy. I know I speak for my prede-

cessors and successors in claiming that the 5th Special Forces Group (Airborne) was the finest collection of professional soldiers ever assembled by the U.S. Army, anywhere, anytime. Francis John Kelly Colonel, Armor 1972
