MCY5AZ - PALMER MAXWELL

It's been more than 20 years since I first read Inherit the Stars, and yet I still rank this book #1 of all my favourite SF books. Like other reviewers have already mentioned, how do you possibly explain a 50,000 year old corpse on the moon? Hogan spins an interesting and believable tale and the result is a page turner you can't put down.

James P. Hogan's 1977 debut Inherit the Stars, first in the Giants series, makes me sad. It is not so much that it has aged badly — some parts of it have withstood the suck fairy — but because of what happened to its once-promising author.

James P. Hogan's Inherit the Stars deserves its status as a science fiction classic. The book is set in the mid-21st century. In the first chapter, a 50,000 year-old human skeleton dressed in a spacesuit is found on the moon. The inescapable conclusion is that a technologically-advanced race of humans existed 50 millenia ago.
