Discusses the composition, structure, occurrence, and changes in reefs during the past 2 billion years. This is the only fully integrated treatment of these factors and processes with the evolutionary history of the organisms that have built reefs. Emphasizes the functional roles of major groups (guilds) of reef-building, reef-destroying, and reef-dwelling organisms in the most complex of all marine communities. A structural model, based on modern reef guilds, is developed. Then the functional roles of each major reef-building higher biologic taxon (algae, sponges, coral, etc.) is determined, and, on this basis, each such taxon is assigned to a reef community guild. Next, the author traces the geologic history and guild assignment of each major taxon through geologic time. The final chapter establishes a succession of ten major reef community types, and considers their extinction and recovery in the light of modern theories of cosmic and earthly events. Profusely illustrated.

The courageous acts of whistleblowing that inspired the world over the past few years have changed our perception of surveillance and control in today's information society. But what are the wider effects of whistleblowing as an act of dissent on politics, society, and the arts? How does it contribute to new courses of action, digital tools, and contents? This urgent intervention based on the work of Berlin's Disruption Network Lab examines this growing phenomenon, offering interdisciplinary pathways to empower the public by investigating whistleblowing as a developing political practice that has the ability to provoke change from within.

India has witnessed a steady increase in dramatic activity since the late nineteenth century through multiple forms and practices. Modern Indian Theatre: An Anthology brings together writings that speak to the historical contexts from which such practices emerged-colonization, cultural-suppression and appropriation, intercultural transformations brought about by the impact of the colonial forces, and acute critical engagement with socio-political issues brought about by the hopes and failures of Independence. The volume addresses pertinent questions like how drama influencesocial change, the response of drama to the emergence and domination of mass media and the proliferation and influence of western media in India, and how mediations of gender, class, and caste influence drama, its language, forms, and aesthetics.

This handbook is a sequel to an earlier volume entitled "A Theory of Supercritical Wing Sections, with Computer Programs and Examples." Since the completion of the first volume, which we shall refer to as Volume I (cf. [II]), some effort has been made to improve our airfoil design program. A number of more desirable air foils have been designed. In addition several of our wing sections have been tested in wind tunnels. We should like to make this material available here, since it is more convenient to use the design program in conjunction with data for a fairly broad range of examples. Moreover, we have developed new analysis programs that supersede our previous work. Chapter I is devoted to a brief discussion of the mathe-

matics involved in our additions and modifications. There is only a minimum emphasis on theory, since the representation of important physical phenomena such as boundary layer shock wave interaction and separation is partly empirical. It is our contention, however, that the computer programs provide a better simulation than might have been expected. Chapter II presents numerical results found by our new methods, as well as comparisons with experimental data. Chapter III contains a discussion of the use of the program together with Fortran listings.

The field of counseling continues to become an increasingly significant part of the health industry of America. In late 1996, Congress passes a bill which helped to include mental health services with other health services. This bill legislatively formalized the tendency that was already sweeping the nation. And as counseling is gaining greater acceptance, larger numbers of people are choosing to enter this field. This book introduces the field and tenets of counseling and provides an up-to-date look at the current issues surrounding counseling. It also is tailored to the eight required categories for accreditation and licensure, content areas specified by the National Board for Certified Counselors. This book takes a personal approach to introducing readers to the field of counseling. Believing that human development is multi-sided, the authors recognize physical, cognitive-behavioral, social, emotional, and spiritual development. The book includes sections on stress management, career choices, responsibilities of counselors, learning counseling skills, theory and practice, and specific foundation areas like group, family, school and community. Also included throughout the text is a great attention to multicultural issues. Counselors and psychologists.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as

a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

The language of Ancient Egypt has been the object of careful investigation since its decipherment in the nineteenth century, but this is the first accessible account that uses the insight of modern linguistics. Antonio Loprieno discusses the hieroglyphic system and its cursive varieties, and the phonology, morphology and syntax of Ancient Egyptian, as well as looking at its genetic ties with other languages of the Near East. This book will be indispensable for both linguists and Egyptologists.

Capitalism could not exist without the coins, banknotes, documents, information

graphics, interfaces, branding, and advertisements made by graphic designers. Even anti-consumerist strategies such as social design and speculative design are appropriated to serve economic growth. It seems design is locked in a cycle of exploitation and extraction, furthering inequality and environmental collapse. CAPS LOCK uses clear language and visual examples to show how graphic design and capitalism are inextricably linked. The book features designed objects and also examines how the study, work, and professional practice of designers support the market economy. Six radical design cooperatives are featured that resist capitalist thinking in their own way, hoping to inspire a more socially aware graphic design.

This is the first translation of the Quran by an American woman. It is a universal and inclusive translation with the hope that Islam will be better understood in the West. She also challenges the use of the word to beat in 4: 34 as meaning to go away which is how the Prophet of Islam understood the word as it has historically justified violence against and abuse of Muslim women. This interpretation must change, she says, and revert to the way the Prophet understood it.

This unique travelogue offers the breathtaking account of the authors' three-month motorcycle journey across two continents, that took them from the northernmost tip of Scotland, across Europe, and down through Africa ending in Cape Town.

The ancient Persian storytelling tradition has survived until the present day among the Tajik villages in the Gissar mountains of Uzbekistan. This book explores the story of Barzu and demonstrates that the historical Transoxania, since the time of Alexander the Great, has always been a melting pot of diverse shared cultures. In the village of Pasurxi, near Boysun in the Surxandaryo region of contemporary Uzbekistan, a vivid oral tradition exists on the basis of stories from the Persian Book of Kings or Šohnoma (Shahnama), composed more than a thousand years ago by

the poet Firdavsi (Ferdowsi). These stories deal with the hero Barzu. The storytellers Jura Kamol and Mullo Ravšan composed two different versions of the story of Barzu in the Tajik as spoken in the Surxandaryo region. They used to tell their stories during evening gatherings in the village.

The Humanitarian Emergency Settings Perceived Needs Scale (HESPER) provides a quick, scientifically robust way of assessing the perceived serious needs of people affected by large-scale humanitarian emergencies, such as war, conflict or major natural disaster. Perceived needs are needs which are felt or expressed by people themselves and are problem areas with which they would like help. The HESPER Scale assesses a wide range of social, psychological and physical problem areas. However, it does not provide an answer as to whether, or how to, offer help. It simply identifies those serious problems that are common in a population. These problems should then be assessed and addressed in more detail. The HESPER Scale was developed by the World Health Organization and King's College London in order to fill several gaps in the humanitarian field. It enables needs assessments to be based directly on the views of people affected by humanitarian emergencies, and provides a more accurate picture of the serious problems with which the overall emergency-affected population wants help. This manual includes the HESPER Scale, as well as a detailed explanation of how to use the HESPER Scale, and how to organize, analyze and report on a HESPER survey.

An ancient inscription identified some of the ruins at el Amarna as "The Place of the Letters of the Pharaoh." Discovered there, circa 1887, were nearly four hundred cuneiform tablets containing correspondence of the Egyptian court with rulers of neighboring states in the mid-fourteenth century B.C. Previous translations of these letters were both incomplete and reflected an imperfect understanding of the Babylonian dialects in which they were written. William Moran devoted a lifetime of study to the Amarna letters to prepare this authoritative English translation. The letters provide a vivid record of high-level diplomatic exchanges that, by modern standards, are often less than diplomatic. An Assyrian ruler complains that the Egyptian king's latest gift of gold was not even sufficient to pay the cost of the messengers who brought it. The king of Babylon refuses to give his daughter in marriage to the pharaoh without first having proof that the king's sister—already one of the pharaoh's many wives—is still alive and well. The king of Karaduniyash complains that the Egyptian court has "detained" his messen-

ger—for the past six years. And Egyptian vassal Rib-Hadda, writing from the besieged port of Byblos, repeatedly demands military assistance for his city or, failing that, an Egyptian ship to permit his own escape.

plore the world of the Bible. Utilizing 140 full color maps key to biblical events and 140 full color photographs illustrating the land, sites, and archaeology of the biblical world, the Atlas draws the reader into the biblical story. The Holman Bible Atlas begins with an introduction to the geography of the biblical world emphasizing the major physical features of the Ancient Near East with special attention given to the geographical regions of Palestine. Information about daily life and the role of archaeology in recovering ancient cultures are discussed.

Highly Siderophile and Strongly Chalcophile Elements in High Temperature Geochemistry and Cosmochemistry, Volume 81 This RIMG (Reviews in Mineralogy & Geochemistry) volume investigates the application of highly siderophile (HSE) and strongly chalcophile elements. This volume has its origin in a short course sponsored by the Mineralogical Society of America and the Geochemical Society held in San Diego, California on the 11th and 12th December 2015, ahead of the American Geophysical Union's Fall Meeting, which featured a session with the same title. Topics in this volume include: analytical methods and data quality experimental constraints applied to understanding HSE partitioning nucleosynthetic variations of siderophile and chalcophile elements HSE in the Earth, Moon, Mars and asteroidal bodies HSE and chalcophile elements in both cratonic and non-cratonic mantle, encompassing both sub-continental and sub-oceanic lithosphere the importance of the HSE for studying volcanic and magmatic processes, and an appraisal of the importance of magmatic HSE ore formation in Earth's crust. Highly siderophile and strongly chalcophile elements comprise Re, Os, Ir, Ru, Pt, Rh, Pd, Au, Te, Se and S and are defined by their strong partitioning into the metallic phase, but will also strongly partition into sulfide phases, in the absence of metal. The chemical properties of the HSE mean that they are excellent tracers of key processes in high temperature geochemistry and cosmochemistry, having applications in virtually all areas of earth science. A key aspect of the HSE is that three long-lived, geologically useful decay systems exist with the HSE as parent (^{107}Pd - ^{107}Ag), or parent-daughter isotopes (^{187}Re - ^{187}Os and ^{190}Pt - ^{186}Os). The material in this book is accessible for graduate students, researchers, and professionals with interests in the geochemistry and cosmochemistry of these elements, geochronology, magmatic ore bodies and the petrogenesis of platinum-group minerals.

Accretionary prisms in convergent margins are natural laboratories for exploring initial orogenic processes and mountain building episodes. They are also an important component of continental growth both vertically and laterally. Accretionary prisms are seismically highly active and their internal deformation via megathrusting and out-of-sequence faulting are a big concern for earthquake and tsunami damage in many coastal cities around the Pacific Rim. The geometries and structures of modern accretionary prisms have been well imaged seismically and through deep drilling projects of the Ocean Drilling Program (and recently IODP) during the last 15 years. Better understanding of the spatial distribution and temporal progression of accretionary prism deformation, structural and hydrologic evolution of the décollement zone (tectonic interface between the subducting slab and the upper plate), chemical gradients and fluid flow paths within accretionary prisms, contrasting stratigraphic and deformational framework along-strike in accretionary prisms, and the distribution and ecosystems of biological communities in accretionary prism settings is most important in interpreting the evolution of ancient complex sedimentary terrains and orogenic belts in terms of subduction-related processes. This book is a collection of interdisciplinary papers documenting the geological, geophysical, geochemical, and paleontological features of modern accre-

tionary prisms and trenches in the northwestern Pacific Ocean, based on many submersible dive cruises, ODP drilling projects, and geophysical surveys during the last 10 years. It also includes several papers presenting the results of systematic integrated studies of recent to ancient on-land accretionary prisms in comparison to modern analogues. The individual chapters are data and image rich, providing a major resource of information and knowledge from these critical components of convergent margins for researchers, faculty members, and graduate and undergraduate students. As such, the book will be a major and unique contribution in the broad fields of global tectonics, geodynamics, marine geology and geophysics, and structural geology and sedimentology.

'Takes the Malayalam novel to new heights and fresh possibilities.' - The Hindu
When Peter Jeevanandam arrives in Sri Lanka to shoot a movie about a human rights activist ostensibly murdered by the LTTE, the government is more than willing to help. As Peter stumbles upon and becomes part of a plot to kill the president, reality, history, myth and fiction collide in explosive, illuminating ways. Sugandhi Alias Andal Devanayagi is a daring novel that portrays the violence inherent in both fascism and revolution. Winner of the 2017 Vayalar Award and the Kerala Sahitya Akademi Award.

Have you ever dreamed about getting on your motorcycle and traveling across the country? Are you envious when you see motorcyclists with far away out-of-state plates and wish that could be you? Are you tired of fantasizing about taking that dream motorcycle trip and want to turn that dream into a reality? Since I began sharing my motorcycle travel photos and videos on social media, I've received countless emails and questions from people interested in motorcycle touring but with no idea where to begin. That's why I decided to write *Motorcyclist's Guide to Travel*. I want to be able to share this information with as many motorcyclists as possible. This book isn't about motorcycle travel theory or philosophy. I share with you the exact same methods and steps I use to plan and execute my own motorcycle trips all throughout the US. I cover how to plan and prepare for the trip, what to do during the trip as well as what to do after you return home. I go over different types of bikes and modifications you can make to them to make them more "touring worthy." I also cover all the different types of riding safety gear and what to look for when purchasing. And finally for those of you who don't know where you want to ride; that's ok. I also show you how come up with your own travel ideas. *Motorcyclist's Guide to Travel* will give you all the information you'll need to finally take that epic trip you've been dreaming about.
