Master the basics of diseases in a flash! This unique package of text, flash cards, and interactive exercises online at DavisPlus (davisplus.fadavis.com) provides all of the elements needed to build a basic understanding of more than 430 diseases and disorders.

This book can be downloaded as a PDF file from here. I started writing this topic on an experimental basis in UkResident.com around 2005. There were a lot of unconnected strings of thoughts in my mind, which did connect to an idea that there is some kind of inner code links that exist behind our physical reality. Moreover, I had been making solitary researches and observations on the codes in languages, right since my childhood. This also seemed to connect heavily with the physical world. In fact, in my book: March of the Evil Empires; English versus the Feudal Languages I did hint at this connection in the last chapter. Later my thought processes went on to connect even to an idea that human body and life processes were all connected to some codes. In later years, I was to observe the efficacy of homeopathy, which I discerned as the medical side of this understanding. For, I had more or less predicted in my mind that if the human body was controlled and designed by a software code, then there should be a medical system that can rectify human body errors through a software approach. I am making my earlier writings into a book. This is that book. However, this book is not the final word on the subject. For, a few years back I was to write my first serious book on the subject of the codes of Reality: Codes of Reality! What is Language? However, if you were to go through this book, which you are now reading, you will see the route through which my thought process developed. These writings are no longer visible in UkResident site, for it changed direction and became an immigration site with business interests in filling Britain with immigrants. I feel that the management has changed. Not sure. However, these writings have been reposted in my own Ved's Writings Pages. Yet, over the years, many persons have read my writings from both sites. No one has cared to comment on them or even to expand the ideas. Currently I do get a feeling that at least some persons have endeavoured to write these ideas as their own. Of this also, I am not sure. It is just a gut feeling that I get when I do some online searches. Yet, it is possible that others also may have come up with these ideas on their own. The only issue is that my thought process developed by seeing the differing ways in which the codes in the different kinds of languages reacted with the reality codes. For this my understandings on feudal language codes versus the codes in English was required. Currently my information on this theme is much more developed. I have done experiments and have had observations that do confirm that human mind can connect to other minds. That there is something of the extraordinary and powerful in sexual exhilaration. That not only sexual energy, but even such things as addictions and such, are connected to powerful value changes in certain life software codes. That just by means of achieving corrections or changes to these values, human energy levels can be increased. It is quite possible to use mind to stimulate sexual desire in others. Or at least make them feel that an attempt at seduction by means of mental code work is being done.

Relationships abound in the library and information science (LIS) world. Those relationships may be social in nature, as, for instance, when we deal with human relationships among library personnel or relationships (i. e. , "public relations") between an information center and its clientele. The relationships may be educational, as, for example, when we examine the relationship between the curriculum of an accredited school and the needs of the work force it is preparing students to join. Or the relationships may be economic, as when we investigate the relationship between the cost of journals and the frequency with which they are cited. Many of the relationships of concern to us reflect phenomena entirely internal to the field: the relationship between manuscript collections, archives, and special collections; the relationship between end user search behavior and the effectiveness of searches; the relationship between access to and use of information resources; the relationship between recall and precision; the relationship between various bibliometric laws; etc. The list of such relationships could go on and on. The relationships addressed in this volume are restricted to those involved in the organization of recorded knowledge, which tend to have a conceptual or semantic basis, although statistical means are sometimes used in their discovery.

Relationships in the Organization of Knowledge Springer Science & Business Media Relationships abound in the library and information science (LIS) world. Those relationships may be social in nature, as, for instance, when we deal with human relationships among library personnel or relationships (i. e. , "public relations") between an information center and its clientele. The relationships may be educational, as, for example, when we examine the relationship between the curriculum of an accredited school and the needs of the work force it is preparing students to join. Or the relationships may be economic, as when we investigate the relationship between the cost of journals and the frequency with which they are cited. Many of the relationships of concern to us reflect phenomena entirely internal to the field: the relationship between manuscript collections, archives, and special collections; the relationship between end user search behavior and the effectiveness of searches; the relationship between access to and use of information resources; the relationship between recall and precision; the relationship between various bibliometric laws; etc. The list of such relationships could go on and on. The relationships addressed in this volume are restricted to those involved in the organization of recorded knowledge, which tend to have a conceptual or semantic basis, although statistical means are sometimes used in their

discovery. Software codes of Reality, Life and Languages! How I worked out the idea starting

from zeroVICTORIA INSTITUTIONS, Aaradhana, DEVERKOVIL 673508 India  
[www.victoriainstitutions.com](http://www.victoriainstitutions.com)This book can be downloaded as a PDF file from here. I started writing this topic on an experimental basis in UkResident.com around 2005. There were a lot of unconnected strings of thoughts in my mind, which did connect to an idea that there is some kind of inner code links that exist behind our physical reality. Moreover, I had been making solitary researches and observations on the codes in languages, right since my childhood. This also seemed to connect heavily with the physical world. In fact, in my book: *March of the Evil Empires; English versus the Feudal Languages* I did hint at this connection in the last chapter. Later my thought processes went on to connect even to an idea that human body and life processes were all connected to some codes. In later years, I was to observe the efficacy of homeopathy, which I discerned as the medical side of this understanding. For, I had more or less predicted in my mind that if the human body was controlled and designed by a software code, then there should be a medical system that can rectify human body errors through a software approach. I am making my earlier writings into a book. This is that book. However, this book is not the final word on the subject. For, a few years back I was to write my first serious book on the subject of the codes of Reality: *Codes of Reality! What is Language?* However, if you were to go through this book, which you are now reading, you will see the route through which my thought process developed. These writings are no longer visible in UkResident site, for it changed direction and became an immigration site with business interests in filling Britain with immigrants. I feel that the management has changed. Not sure. However, these writings have been reposted in my own Ved's Writings Pages. Yet, over the years, many persons have read my writings from both sites. No one has cared to comment on them or even to expand the ideas. Currently I do get a feeling that at least some persons have endeavoured to write these ideas as their own. Of this also, I am not sure. It is just a gut feeling that I get when I do some online searches. Yet, it is possible that others also may have come up with these ideas on their own. The only issue is that my thought process developed by seeing the differing ways in which the codes in the different kinds of languages reacted with the reality codes. For this my understandings on feudal language codes versus the codes in English was required. Currently my information on this theme is much more developed. I have done experiments and have had observations that do confirm that human mind can connect to other minds. That there is something of the extraordinary and powerful in sexual exhilaration. That not only sexual energy, but even such things as addictions and such, are connected to powerful value changes in certain life software codes. That just by means of achieving corrections or changes to these values, human energy levels can be increased. It is quite possible to use mind to stimulate sexual desire in others. Or at least make them feel that an attempt at seduction by means of mental code work is being done.
