This classic textbook sets out clearly and concisely how to evaluate symptoms and elicit relevant physical signs. It describes the practical skills which every clinician must acquire and develop in order to evolve diagnostic procedures and management strategies and plans. 'Highly Commended' in the 2006 and 2010 BMA Medical Book Competitions, this Thirteenth Edition contains over 500 clinical photographs and diagrams to illustrate the text, with new topics added to make the book even more comprehensive. This Thirteenth Edition has four sections: History taking and general examination. System examination covering symptoms and signs. Examination in special situations including babies & children and the critically ill. How to pass an OSCE. Included on the Student Consult site are the specially-recorded videos demonstrating many of the clinical examination routines described in the main text. The book starts with a general overview section on history taking and the general examination that provide the framework on which to hang the detail. The systematic examination section documents clearly the relevant history, examination and special investigations as well as giving advice on their significance. The third section covers examination in specific situations and emphasises an integrated and structured approach to these patients. A final section spells out how to demonstrate the techniques learned in the book in an OSCE. Macleod's is closely linked to its sister publication, Davidson's Principles & Practice of Medicine, which complements the information in this text. Available with full online access on Student Consult and ancillary videos demonstrating key clinical examination routines following the format laid out in the book. There are two new chapters on examination in specific situations: The frail elderly The adult with fever A new section explicitly spells out how to demonstrate the techniques learned in

the book in an OSCE and other formative and summative examinations. Over 50 new text boxes highlight the evidence-base for the examination techniques discussed. An Advisory Board of students, junior doctors, and representatives from the nursing, ambulance, Primary Care and academic communities from six countries has made detailed comments and critically appraised the entire book. The text has been substantially rewritten with more on medically unexplained symptoms in the History Taking chapter and extended coverage of diabetes mellitus in the Endocrine System chapter. Integrated with the online text are clinical examination videos of trained professionals performing many of the examination routines described in the book with an accompanying commentary by the Editor, Professor Colin Robertson Two new videos show how the Glasgow Coma Scale should be performed in clinical situations, demonstrating the correct techniques and also common pitfalls in using the GCS.

Amputation in Literature and Film: Artificial Limbs, Prosthetic Relations, and the Semiotics of "Loss" explores the many ways in which literature and film have engaged with the subject of amputation. The scholars featured in this volume draw upon a wide variety of texts, both lesser-known and canonical, across historical periods and language traditions to interrogate the intersections of disability studies with social, political, cultural, and philosophical concerns. Whether focusing on ancient texts by Zhuangzi or Ovid, renaissance drama, folktales collected by the Brothers Grimm, novels or silent film, the chapters in this volume highlight the dialectics of "loss" and "gain" in narratives of amputation to encourage critical dialogue and forge an integrated, embodied understanding of experiences of impairment in which mind and body, metaphor and materiality, theory and politics are considered as interrelated and interacting aspects of disability and ability.

This book offers a comprehensive, up-to-date overview of optimal postoperative care in patients who have undergone thoracic surgery and discusses challenging issues that are of interest not only in the context of thoracic surgery but also more generally within the fields of anesthesia, intensive care, and pain medicine. The coverage ranges, for example, from use of non-invasive ventilation, extracorporeal membrane oxygenation, and new monitoring devices to fluid management, pain control, and treatment of arrhythmias. A key feature of the book is the exceptionally attractive list of authors, who represent the most authoritative experts on the topics that they address. The approach is appropriately multidisciplinary, acknowledging that in many centers thoracic anesthesiologists are responsible for care during the postoperative period. This book is exceptional in being devoted solely to postoperative care in thoracic surgery, even though the difficulties involved in thoracic operations sometimes exceed those of cardiac surgery, especially in the postoperative period.

Bailey & Love is the world famous textbook of surgery. Its comprehensive coverage includes the scientific basis of surgical practice, investigation, diagnosis, and pre-operative care. The Nd:YAG laser has finally become the multidisciplinary and multi-specialty tool of the 1980s. Primarily developed for gastrointestinal applications for controlling bleeding, at present it is also used for endoscopic treatment of gastrointestinal tumors, endobronchial cancer, and bladder and gynecological lesions and finding applications in otorhinolaryngology and neurosurgery. Development of laser scalpels and focusing head-pieces has now allowed the Nd:YAG laser to be used for open surgical procedures in general and plastic surgery, head and neck surgery, urology, gyne-

cology, dermatology, and neurosurgery. The rapid development in ceramic technology has led to contact surgery allowing physicians a choice of excision, vaporization, coagulation, incision, or combinations thereof by easily changing probes rather than having to select new laser wavelengths. This technology is rapidly replacing the carbon dioxide laser which currently has no adequate flexible waveguide for fiberoptic endoscopy, cannot be used in a water medium (e.g., bladder), and has poor coagulation properties when compared to the Nd:YAG laser. Future developments may see the Nd:YAG laser even replacing electrocautery in the operating room due to its greater safety and efficacy. Local hyperthermia (laserthermia) with computer control, photodynamic therapy, and ophthalmic applications make the Nd:YAG laser the most exciting technological advancement in medicine and surgery for the 1980s.

Written by registrars who have all recently passed the MRCS, plus an MRCS examiner, this comprehensive and user-friendly revision guide also contains considerable input from other senior specialists.

On 29 January 2008 Philip Gould was told he had cancer. He was stoical, and set about his treatment, determined to fight his illness. In the face of difficult decisions he sought always to understand the disease and the various medical options open to him, supported by his wife Gail and their two daughters, Georgia and Grace. In 2010, after two hard years of chemotherapy and surgery, the tests came up clear - Philip appeared to have won the battle. But his work as a key strategist for the Labour party took its toll, and feeling ill six months later, he insisted on one extra, precautionary test, which told him that the cancer had returned. Thus began Philip's long, painful but ultimately optimistic journey towards death, during which time he began to appreciate

and make sense of his life, his work and his relationships in a way he had never thought possible. He realized something that he had never heard articulated before: death need not be only negative or painful, it can be life-affirming and revelatory. Written during the last few months of his life, *When I Die* describes the journey Philip took with his illness, leaving to us what he called his lessons from the death zone. This courageous, profoundly moving and inspiring work is as valuable a legacy to the world as anyone could wish to bestow - hugely uplifting, beautifully written with extraordinary insight.

The coverage ranges, for example, from use of non-invasive ventilation, extracorporeal membrane oxygenation, and new monitoring devices to fluid management, pain control, and treatment of arrhythmias. A key feature of the book is the exceptionally attractive list of authors, who represent the most authoritative experts on the topics that they address. The approach is appropriately multidisciplinary, acknowledging that in many centers thoracic anesthetists are responsible for care during the postoperative period. This book is exceptional in being devoted solely to postoperative care in thoracic surgery, even though the difficulties involved in thoracic operations sometimes exceed those of cardiac surgery, especially in the postoperative period. *SBA and EMI for the General Surgery FRCSThis is a key resource for trainees preparing to face the challenging FRCS section 1 examination. He was stoical, and set about his treatment, determined to fight his illness. In the face of difficult decisions he sought always to understand the disease and the various medical options open to him, supported by his wife Gail and their two daughters, Georgia and Grace. In 2010, after two hard years of chemotherapy and surgery, the tests came up clear - Philip appeared to have won the battle. But his work as a key strategist for the Labour party took its toll, and feeling ill six months later, he insisted on one extra, precautionary test, which told him that the cancer had returned. Thus began Philip's long, painful but ultimately optimistic journey towards death, during which time he began to appreciate and make sense of his life, his work and his relationships in a way he had never thought possible. He realized something that he had never heard articulated before: death need not be only negative

or painful, it can be life-affirming and revelatory. Written during the last few months of his life, *When I Die* describes the journey Philip took with his illness, leaving to us what he called his lessons from the death zone. This courageous, profoundly moving and inspiring work is as valuable a legacy to the world as anyone could wish to bestow - hugely uplifting, beautifully written with extraordinary insight. *Surgery at a Glance* Wiley-Blackwell Surgery at a Glance has set a new standard for review texts in surgery. Limbs, Prosthetic Relations, and the Semiotics of "Loss" explores the many ways in which literature and film have engaged with the subject of amputation. The scholars featured in this volume draw upon a wide variety of texts, both lesser-known and canonical, across historical periods and language traditions to interrogate the intersections of disability studies with social, political, cultural, and philosophical concerns. Whether focusing on ancient texts by Zhuangzi or Ovid, renaissance drama, folktales collected by the Brothers Grimm, novels or silent film, the chapters in this volume highlight the dialectics of "loss" and "gain" in narratives of amputation to encourage critical dialogue and forge an integrated, embodied understanding of experiences of impairment in which mind and body, metaphor and materiality, theory and politics are considered as interrelated and interacting aspects of disability and ability.

Advances in Nd:YAG Laser Surgery Springer Science & Business Media The Nd:YAG laser has finally become the multidisciplinary and multi-specialty tool of the 1980s. Primarily developed for gastrointestinal applications for controlling bleeding, at present it is also used for endoscopic treatment of gastrointestinal tumours, endobronchial cancer, and bladder and gynecological lesions and finding applications in otorhinolaryngology and neurosurgery. Development of laser scalpels and focusing head-pieces has now allowed the Nd:YAG laser to be used for open surgical procedures in general and plastic surgery, head and neck surgery, urology, gynecology, dermatology, and neurosurgery. The rapid development in ceramic technology has led to contact surgery allowing physicians a choice of excision, vaporization, coagulation, incision, or combinations thereof by easily changing probes rather than having to select new laser wavelengths. This technology is rapidly replacing the carbon dioxide laser which currently has no adequate flexible waveguide for fiberoptic endoscopy, cannot be used in a water medium (e.g., bladder), and has poor coagulation properties when compared to the Nd:YAG laser. Future developments may see the Nd:YAG laser even replacing electrocautery in the operating room due to its greater safety and efficacy. Local hyperthermia (laserthermia) with computer control, photodynamic therapy, and ophthalmic applications make the Nd:YAG laser the most exciting technological advancement in medicine and surgery for the 1980s.

There is a need for a concise revision guide for the FRCS General Surgery Intercollegiate exam, and this is such a book, serving as a companion for the trainee throughout the course of their six-year training rotation. It reflects the exact framework of the exam syllabus issued by the Joint Committee on Higher Surgical Training (JCHST), and contains the most recently amended guidelines. The question and answer style used is a popular and effective method which lends itself perfectly to studying either alone or as a group, wherein one acts as examiner and the other as candidate. Further, the exam is very clinically orientated, with vivas based on a clinical scenario, using patients and images as method of initiating clinical discussion. This book will act as supplementary reading for any course relating to the FRCS exit examination in general surgery. Both the authors and main contributors have passed the FRCS exam in general surgery and have many years experience in postgraduate medical education.

This boxed set of all eight volumes of the Companion to Specialist Surgical Practice series provides surgeons in higher training and those wanting an update with a practical reference source of the most current information on recent developments, the latest management issues and operative procedures in each of the major sub-specialties. The series is thoroughly referenced and supported by evidence-based data. In order to meet the increasing interest in Evidence-Based Medicine the authors have cited wherever available the meta-analysis of randomised controlled trials, systematic literature reviews and observational studies and have identified key references within the text that support evidence-based practice. Test sections and references are highlighted using a 'scalpel code' to indicate the presence of evidence for the interventional procedures under discussion. A templated approach is used across the series to provide up-to-date information in a way that will be consistent and familiar to the reader.
