This highly anticipated follow-up to the massively successful Ecoholic focuses on the home as the mainstay of sustainable living. Our resident Ecoholic comes to the rescue again, offering reminders and tips on how to keep your castle (however humble) clean, energy-efficient and healthy. We spend so much time at home – why not make it a sustainable haven instead of a polluting, off-gassing cesspool? Ecoholic Home addresses the green side of the economic crisis, and includes a resource guide for finding designers and contractors, and for renovating and shopping green.

- Cleaning: product comparisons, disposal reminders, laundry tips
- Cooking: avoiding Teflon, omitting Bisphenol A, reducing packaging
- Powering: green energy (solar and geothermal), bundling (Bullfrog)
- Maintaining: dehumidifiers, lighting options, ice removers
- Renovating: buying energy-efficient appliances, choosing environmentally friendly building materials, insulating your home
- Moving: LEED-certified homes, “greening” your first apartment

Era 1997, e esta revista tinha apenas um ano de idade, quando foi promulgada a LGT (Lei Geral das Telecomunicações), que revolucionou o país. Começávamos a nos acostumar com a vida sem inflação, ou com uma inflação “decente” após termos superado o recorde mundial dos 1.000% ao ano – alguém se lembra? A internet ainda era novidade para a maioria, mas sabia-se que iria transformar tudo a

nossa volta. O país que inventou a reserva de mercado, herança da ditadura militar, não podia mais se dar ao luxo de ignorar os avanços tecnológicos.

In its 114th year, Billboard remains the world's premier weekly music publication and a diverse digital, events, brand, content and data licensing platform. Billboard publishes the most trusted charts and offers unrivaled reporting about the latest music, video, gaming, media, digital and mobile entertainment issues and trends.

Earth Day celebrates our beautiful planet and calls us to act on its behalf. Some people spend the day planting flowers or trees. Others organize neighborhood clean-ups, go on nature walks, or make recycled crafts. Readers will discover how a shared holiday can have multiple traditions and be celebrated in all sorts of ways.

Some 3,000 entries (900 new) describe programs and personalities from the birth of the industry until today. In addition, coverage encompasses technological matters, legal issues and cases, mergers and acquisitions, terms and concepts, and events in the industry's history. The scope is international. Includes some small photos, but the temptation to litter the text with portraits and stills has been resisted.

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology.

The 40-year history of high definition television technology is traced from initial studies in Japan, through its development in Europe, and then to the United States, where the first all-digital systems were implemented. Details are provided about advances in HDTV technology in Australia and Japan, Europe's introduction of HDTV, Brazil's innovative use of MPEG-4 and Chi-

na's terrestrial standard. The impact of HDTV on broadcast facility conversion and the influx of computer systems and information technology are described, as well as the contributions of the first entrepreneurial HD videographers and engineers. This thoroughly researched volume highlights several of the landmark high-definition broadcasts from 1988 onward, includes input gathered from more than 50 international participants, and concludes with the rollout of consumer HDTV services throughout the world.

Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews.

Uno straordinario viaggio all'interno della crescente industria dei videogiochi. Nel giro di tre decenni un mercato di nicchia è arrivato a primeggiare nel segmento "tempo libero" togliendo lo scettro del fatturato a cinema e musica. Centinaia di milioni di individui nel mondo, proprio ora, stanno interagendo, da soli o in multiplayer, su console e PC. Ma cosa ci riserva il futuro? Quali sono le nuove sfide che sviluppatori, publisher e semplici appassionati si troveranno ad affrontare? Gamification - I Videogiochi nella Vita Quotidiana racconta la straordinaria trasformazione in atto, il passaggio da un divertimento "fisico" ad uno "digitale". Non più e non solo costosi cd-rom e cartucce contenti Call of Duty e Gran Turismo, ma prodotti digitali distribuiti su una moltitudine di piattaforme e spesso a costo zero. Una rivoluzione copernicana in grado di gettare le basi di una nuova generazione di "videogiocatori" formatasi con FarmVille su Facebook e Angry Birds su iPhone.

Imagine fuel without fear. No climate change. No oil spills, no dead coalminers, no dirty air, no devastated lands, no lost wildlife. No energy poverty. No oil-fed wars, tyrannies, or terrorists. No leaking nuclear wastes or spreading nuclear weapons. Nothing to run out. Nothing to cut off. Nothing to worry about. Just energy abundance, benign and affordable, for all, forever. That richer, fairer, cooler, safer world is possible, practical, even profitable-because saving and replacing fossil fuels now works better and costs no more than buying and burning them. Reinventing Fire shows how business-motivated by profit, supported by civil society,

sped by smart policy-can get the US completely off oil and coal by 2050, and later beyond natural gas as well. Authored by a world leader on energy and innovation, the book maps a robust path for integrating real, here-and-now, comprehensive energy solutions in four industries-transportation, buildings, electricity, and manufacturing-melding radically efficient energy use with reliable, secure, renewable energy supplies. Popular in tone and rooted in applied hope, Reinventing Fire shows how smart businesses are creating a potent, global, market-driven, and explosively growing movement to defossilize fuels. It points readers to trillions in savings over the next 40 years, and trillions more in new business opportunities. Whether you care most about national security, or jobs and competitive advantage, or climate and environment, this major contribution by world leaders in energy innovation offers startling innovations will support your values, inspire your support, and transform your sense of possibility. Pragmatic citizens today are more interested in outcomes than motives. Reinventing Fire answers this trans-ideological call. Whether you care most about national security, or jobs and competitive advantage, or climate and environment, its startling innovations will support your values, inspire your support, and transform your sense of possibility.

Volume is indexed by Thomson Reuters BCI (WoS). This special-topic volume Advances in Light-Emitting Materials, makes an important contribution to the field of silicon and III-nitride semiconductors. It begins with a brief history of visible-light emitting diodes. However, silicon is currently expanding from micro-electronics and into photonics. Due to its unsuitable band-gap, it has not previously been the material-of-choice for opto-electronic integration. That is now beginning to change and silicon devices have been developed which have the capability to emit, modulate, guide and detect light and which can be combined with microelectronics to form electronic and photonic integrated circuits. Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.
