The Risk Management Handbook Risk Management at Board Level

Forecasting Success This book is a practical guide to risk management, its aim to explain how businesses and discrete projects need to be aware of how risk events can occur and what can be done to understand and manage them. It has been created because when I started in risk management there were no readily available books to explain how to understand cause, risk and events through the construction industries that made sense, or added anything extra beyond what I had found out reading risk blogs and short papers. The online explanations were helpful but left a lots of gaps that needed to be filled in. As such after many years in the industry I have decided to produce this explanation of risk management, its aimed at the risk curious, who want to know what its all about, students who need to know how to explain the who, what and why of risk and project delivery personnel who need to be able to understand the risk process and actively contribute, as well as risk professionals just starting out in their career or for that matter experienced risk managers who want to validate their beliefs or consider mine if different.

This book is a practical guide to risk management, its aim to explain how businesses and discrete projects need to be aware of how risk events can occur and what can be done to understand and manage them. It has been created because when I started in risk management there were no readily available books to explain how to understand cause, risk and events through the construction industries that made sense, or added anything extra be-

yond what I had found out reading risk blogs and short papers. The online explanations were helpful but left a lots of gaps that needed to be filled in. As such after many years in the industry I have decided to produce this explanation of risk management, its aimed at the risk curious, who want to know what its all about, students who need to know how to explain the who, what and why of risk and project delivery personnel who need to be able to understand the risk process and actively contribute, as well as risk professionals just starting out in their career or for that matter experienced risk managers who want to validate their beliefs or consider mine if different.
