The trigger point is the most pressure-sensitive place in the fiber bundle, b By rolling the fiber bundle quickly below the finger tip at the location of the trigger point (fast palpation), a local twitch reaction is often caused, which manifests most clearly as the main movement between the trigger point and the attachment of the muscle fibers.

Sensitive areas of tight muscle fibers can form in your muscles after injuries or overuse. These sensitive areas are called trigger points. A trigger point in a muscle can cause strain and pain throughout the muscle. When this pain persists and worsens, doctors call it myofascial pain

syndrome.

Trigger points are localised areas of hyperirritable neural tissue lying in taut bands in muscles or fascia which have been stressed.
